UltraTape Releases New Cuff Sealing Tape 1114P

February 3, 2010. UltraTape Industries, a division of Delphon and the premier supplier of Cleanroom tape and labels to the Aerospace, Semiconductor and Medical industries, announced today the release of its new Cuff Sealing Tape. For applications where persons are required to wear protective clothing or garments in order to prevent particulate migration and/or avoid contact with contaminated materials, UltraTape's Cuff Sealing Tape effectively seals the area between the glove and the garment.

The Cuff Sealing tape is made of a low tack conformable polyethylene and is perforated at convenient intervals to allow the user to apply the tape with one hand. It is particle-free and residue-free and is processed through UltraTape's clean manufacturing process to ensure that it adheres to strict cleanroom requirements. The tape is also available in a gamma irradiated version for applications where sterility is a concern.
