

Introducing UltraTape's **Silicone-Free UTL518 Labels** The Ultimate Cleanroom Label Solution for Semiconductor, Electronics, & Aerospace Manufacturers

Silicone contamination can lead to serious problems like systems failures, product defects, and manufacturing delays for semiconductor, electronics, and aerospace/defense manufacturers.

Silicone's inherent properties, like its ability to migrate and resistance to removal, make it a significant source of contamination in critical manufacturing areas.

Are you looking for a reliable, cleanroom-compatible labeling solution that won't compromise your critical environments? Look no further than UltraTape's UTL518 SILICONE-FREE thermal transfer labels.

Why Choose UltraTape's UTL518?

Silicone-Free Assurance: Silicone contamination can lead to serious problems like adhesive failures, product defects, and manufacturing delays. Our label stock is certified silicone-free, adding assurance that your labeling system will not contaminate your cleanroom.

Clean Removal: The UTL518 label stock features high-purity acrylic adhesive that allows for clean removal with no residue left behind. a white polypropylene base film with a thermal transfer printable surface, allowing for clean removal with minimal adhesion build-up.

Advanced Composition: Our silicone-free labels are comprised of a white polypropylene base film with a thermal printable surface. The labels are supplied on a PET base liner with a non-silicon release coating, and is engineered to meet the rigorous demands of the electronics and semiconductor industries.

Elevate your Cleanroom Standards

UltraTape's UTL518 is the ideal choice for manufacturers who prioritize purity and performance. By choosing our silicone-free label stock, you can maintain the integrity of your clean room environment while benefiting from a high-quality, reliable labeling solution.
